Poor acoustics is the *number one* cause of workplace dissatisfaction and the most significant factor affecting employee performance.

The LogiSon® Acoustic Network addresses this problem by distributing an engineered background sound throughout the workplace. The sound covers conversations and noise, while remaining comfortable and unobtrusive.

This technology is one of the smallest investments you'll make in your facility, but one that can greatly impact your bottom line.

➔ Benefits

- Noise control
- Speech privacy
- Improved productivity
- Lower project costs
- Facility flexibility
- Quick ROI

As the inventors of networked sound masking technology, we know that *flexibility* is the key to success.

Why is flexibility important? Because it's not enough to introduce just any sound into your space. It has to be the *right sound*, in the *right place*, at the *right time*.

The LogiSon Acoustic Network provides this superior level of acoustic control and puts it at your fingertips.

➔ Applications

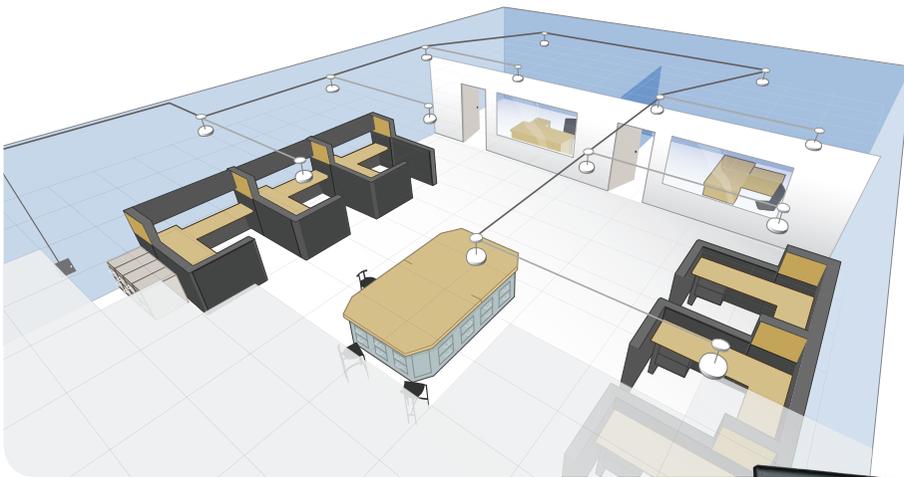

Banks
Call Centers
Commercial Offices

Courthouses
Dealerships
Healthcare Facilities
Hotels

Houses of Worship
Libraries
Military Facilities
Schools

Cable

Hub and Loudspeaker

The hubs and loudspeakers are typically installed above the ceiling tiles, but can also be used in hard or open ceilings. The control panel can be mounted on a wall or in an equipment closet. Wiring consists of a single low-voltage cable.

➔ One Solution

Smart engineering makes the LogiSon Acoustic Network the right solution for any project. Its *networked-decentralized* architecture is easily scaled to accommodate facilities of all sizes, from a single office to a multi-building campus.

A range of loudspeaker models is available to suit a variety of installation conditions, but the system's backbone is always the same high-performance LogiSon technology. Continuous enhancement since its launch keep it at the forefront of the sound masking industry.

➔ Complete

Also need paging or background music? Simply connect a source, such as your telephone system, to the control panel.

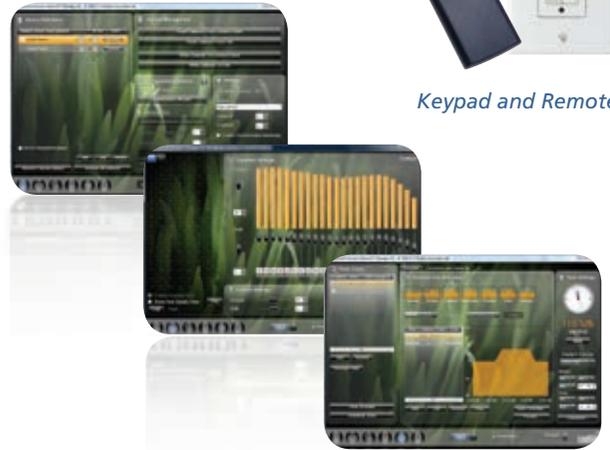

Independent sound masking and paging setup mean you never have to compromise. And because zoning is digital rather than hardwired, you can page whenever and wherever required.

Control Panel

Keypad and Remote

Acoustic Network Manager Software

Components meet UL, FCC, CE and RoHS standards and are approved for use in air-handling plenums.

➔ Effective

The LogiSon Acoustic Network is uniquely designed to provide the highest degree of control over the masking sound throughout your facility, ensuring you get the most from your investment.

Adjustment zones are 1 to 3 loudspeakers. Each offers precise volume control in 0.5 dB steps and third-octave equalization over the full masking spectrum, including the low frequencies essential for comfort.

After installation, TARGET Software accurately tunes the masking sound to the desired spectrum, maximizing speech privacy and noise control.

➔ Customized

A gradual ramp-up feature can be activated for retrofits. From that point, a sophisticated timer schedules the masking volume to match expected activity levels throughout the day, week or month, as well as on holidays.

Keypads, remotes and a robust software suite give occupants on-demand control of the sound masking and paging according to allowed access levels (e.g. in private offices and meeting rooms).

➔ Secure

Performance is monitored 24/7. If an issue occurs, the LogiSon Acoustic Network provides a warning signal and/or sends an email to specified recipients.

Its contemporary design also makes the LogiSon Acoustic Network the best choice for open ceilings.

➔ Easy To Manage

The LogiSon Acoustic Network offers both hardware- and software-based control. You can manage the settings and zoning for a loudspeaker, a group of loudspeakers, or an entire campus from the control panel or your computer.

Changes can be made in minutes following renovations, moving furniture or personnel. The ease of future reconfiguration and low energy needs reduce lifecycle costs while ensuring peak performance and occupant satisfaction at all times.

These are just a few of the features our clients use every day to enhance the sound masking system's value and their acoustic comfort®.

➔ Proven Performance

The LogiSon Acoustic Network is installed in hundreds of millions of square feet worldwide for clients ranging in size from small business to Fortune 500, including:

A.C. Nielsen
Bank of New York
CB Richard Ellis
CIBC
Citibank
Cushman & Wakefield
Deloitte
Ernst & Young
GlaxoSmithKline
Hanesbrands
Hilton
IBM
Jones Lang LaSalle

Kraft
Microsoft
MillerCoors
Modesto Memorial
Nokia
Polo Ralph Lauren
Procter & Gamble
Royal Bank of Canada
Smith & Nephew
The Hartford
Tribeca Grand
US Navy
Wachovia-Wells Fargo
